Chapter 0 - Introduction

HTML → Hyper Text Mark Up Language

HTML is the language of the web. It is used to create websites
We use HTML tags to define look & feel of a website

With understanding of these tags and How to put them together, we can create beautiful websites easily!

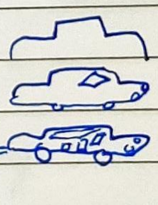

Then Why CSS & JavaScript
HTML is used for defining layout of a page - A barebone page structure

CSS is used to add styling to that barebone page created using HTML

JavaScript is used to program Logic for the page layout eg. What happens when a user hovers on a text, when to hide or show elements etc.

A Beautiful analogy

HTML = Car body (only metal)
CSS = Car paint, decoration etc.
JavaScript = Car engine + Interior logic

We will start learning how to build beautiful layouts in this course.

Installing VS Code

We can use any text editor of our choice. Here I am using VS Code because it is light weight, opensource & from Microsoft.

Go to google, type VS Code & install it

Note : You can write HTML even in Notepad. Text editors like VS Code just makes these things easier
